Care Communicator

We are creating a new and unique initiative within digital health with our vision:

“Make your own choices for your own health”.

A digital health service, Care Communicator, for international use, that links the patient with the caregiver. This will simplify the process to get quick and adequate health care outside the patient’s normal geographic border

Solutions

- ▶ **Faster Access to Care** - Both patients and caregivers are in obscurity regarding where queue times are shorter and also the possibility for free or subsidised care within the EU and even more obscure on a wider international scale.
- ▶ **Using verified care quality as a choice for care.** Care communicator will help patients to understand which clinics have good quality reports and patient satisfaction ratings.
- ▶ **Independent care connector.** We are showing patient different clinics, nationally and internationally including care waiting times.
- ▶ **Have all your health data in once place, handled by the patient** where select parts can be shared temporarily.
- ▶ **IoT/Remote care enabled** where data from devices can be gathered and shared enabling for remote digital healthcare or specialised services, e.g. heart health monitoring, etc.

How Clinics can benefit

- ▶ **Care Communicator supplies clinics with new patients,** national as well as international
- ▶ **Possibility to sell IoT related services** like remote health monitoring
- ▶ **Saves time for the clinic** in finding key medical data from the patient
- ▶ **Easy access for international medical 2nd opinions** as doctor to doctor communication will be possible with the patients consents.
- ▶ **Ease of Communications with the patient**
- ▶ **Patient/customer surveys** on care quality

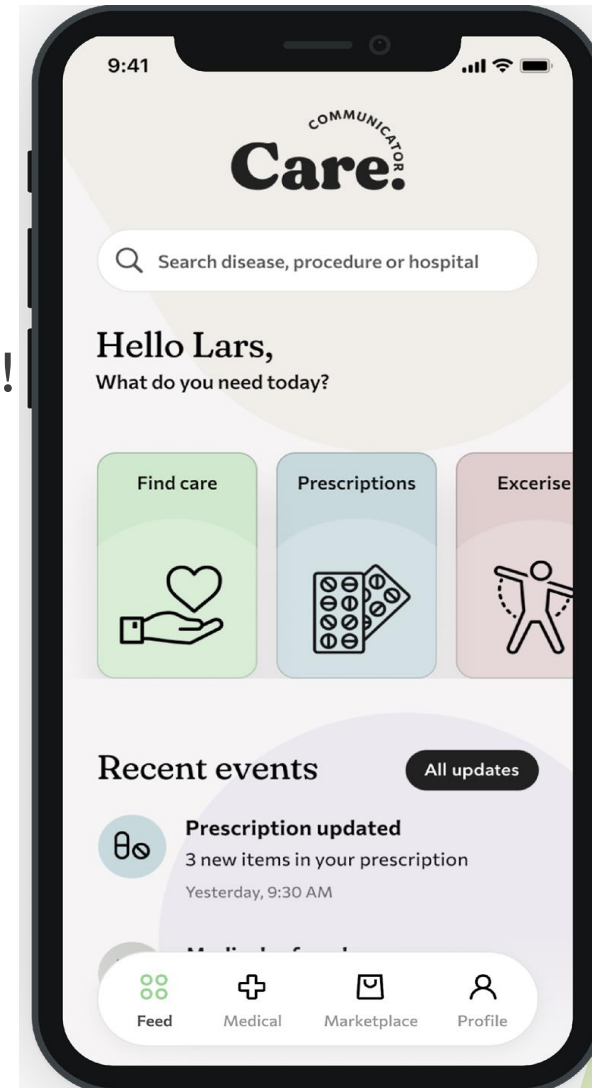

Care Communicator

What

- ▶ Free app for smartphone/laptop
- ▶ Digital care eco-system enabling IoT Healthcare
- ▶ “One-Stop-Shop” for the patient wherever you go!

Why - starting with care queues

- ▶ Quicker care
- ▶ Less expensive alternatives
- ▶ Find experts, show care quality data, 2nd opinions
- ▶ Give patients knowledge about care guarantee, national resp. EU-level
- ▶ Simplify for doctors to bring down the care queue
- ▶ Private insurances are looking for alternatives
- ▶ Help hospitals to re-direct and sell care
